NEWS AND HEADINES > LOCAL NEWS Feeling—Inclusive Exhibition Finally, the pair had to make sure that blind, partially sighted, and sighted people could all enjoy the exhibition. In the dimly lit room, each piece of art is lit with a spotlight, which is helpful for the sighted but doesn't do the blind any good at all. One possible solution was haptic gloves, like those used in virtual reality video games. The special gloves are sometimes used in museums to enable visitors to virtually touch famous works of art. For this project, however, virtual reality technology was completely beyond the budget. Another idea was to do what traditional museums occasionally do—give special permission for certain people to touch works of art with gloved hands. Dolby and Bellar wanted everyone to have as close to the same experience as possible, so this wasn't a good solution. The simplest solution was to go low tech and allow visitors to directly touch the pieces. And that's just what they did! At this exhibition all visitors are encouraged to touch the art. By doing so, they can feel the texture in the same way that the artists did when they were creating it. Tickets for Feeling are available online or on-site, and admission prices vary from \$5 to \$15 per person At traditional art galleries and museums, touching the items on display is strictly prohibited, But depending on age and day of the week. Feeling—Inclusive Exhibition

At traditional art galleries and museums, touching the items on display is strictly prohibited. But Feeling, an inclusive exhibition on now at Gallery Libre, breaks the rules. At this exhibition, touching is not only allowed, it's necessary!

Feeling was designed by Timothy Dolby and Karen Bellar to be experienced by everyone, including the visually impaired. This unique exhibition features works of art-120 in all-created by visually impaired students. As they do with all of their projects, Dolby and Bellar began by learning about the artists and the potential visitors before designing the exhibition.

First, the duo looked into how blind and partially sighted artists go about creating their works. They discovered that many of the artists found it easier to draw, paint, or sculpt on a flat surface, like a desk or table, while sitting down. It made sense, then, to display the artworks on flat surfaces, rather than on walls, as is done in typical gallery or museum exhibitions. Displayed on flat surfaces, the

pieces, as well as the captions in braille that accompany them, are easy for visitors to put their hands on.

Next, Dolby and Bellar thought about how sighted people might learn what it's like to be visually impaired. They came up with a clever idea. They placed the first piece, a large sculpture, in a completely dark room. That allowed the sighted and visually impaired alike to be able to "see" the sculpture using only their hands. This experience introduces sighted visitors to the world of the visually impaired. In addition, it gives them a sense of what it's like to try to navigate through an unfamiliar space using their other senses. The other pieces in the collection are displayed in a dimly lit room on an eighty-meter-long table that guides the visitors from piece to piece along the walls of the room. This allows all visitors to walk through the entire exhibition without assistance.

Finally, the pair had to make sure that blind, partially sighted, and sighted people could all enjoy the exhibition. In the dimly lit room, each piece of art is lit with a spotlight, which is helpful for the sighted but doesn't do the blind any good at all.

One possible solution was haptic gloves, like those used in virtual reality video games. The special gloves are sometimes used in museums to enable visitors to virtually touch famous works of art. For this project, however, virtual reality technology was completely beyond the budget.

Another idea was to do what traditional museums occasionally do—give special permission for certain people to touch works of art with gloved hands. Dolby and Bellar wanted everyone to have as close to the same experience as possible, so this wasn't a good solution.

The simplest solution was to go low tech and allow visitors to directly touch the pieces. And that's just what they did! At this exhibition all visitors are encouraged to touch the art. By doing so, they can feel the texture in the same way that the artists did when they were creating it.

Tickets for Feeling are available online or on-site, and admission prices vary from \$5 to \$15 per person depending on age and day of the week. The exhibition opened on July 10 and was originally scheduled to run until August 29, but attendance has been high, and the exhibition has been extended through

From November, the exhibition begins a tour of Europe, and will visit galleries in Rome, Brussels, Berlin, and London.

Glossary

- ▶ partially sighted unable to see well cf. sighted (adj) able to see / blind (adj) unable to see
- > sculpt (v) to make figures or objects from stone, wood, clay, metal etc
- ▶ haptic (adj) giving the feeling of physically touching something
- texture (n) the way a surface or material feels when you touch it
- on-site (adv) at a particular place, rather than away from it
